To: pp Pettina <pppettina@gmail.com>

```javascript
async function fetchData() {
    try {
        const response = await fetch('https://toxyu2j8cc.execute-api.us-east-1.amazonaws.com/dev/data');
        const apiResponse = await response.json();
        return JSON.parse(apiResponse.body);
    } catch (error) {
        console.error("Failed to acquire data:", error);
        return [];
    }
}

const chart = new ApexCharts(document.querySelector("#chart"), {
    chart: { type: 'line', height: 350 },
    series: [
        { name: 'Temperature (°C)', data: [] },
        { name: 'Humidity (%)', data: [] }
    ],
    xaxis: { type: 'datetime' },
    yaxis: [
        { title: { text: 'Temperature (°C)' } },
        { opposite: true, title: { text: 'Humidity (%)' } }
    ]
});
chart.render();

setInterval(async () => {
    const items = await fetchData();
    if (items.length === 0) return;

    chart.updateSeries([{
        name: 'Temperature (°C)',
        data: items.map(d => [d.timestamp * 1000, d.temperature])
    }, {
        name: 'Humidity (%)',
        data: items.map(d => [d.timestamp * 1000, d.humidity])
    }]);
}, 10000);
```
